

Company Overview

Located in Irvine - in the heart of Southern California's technology center - Synegi specializes in the design and implementation of high performance data protection systems for customers throughout the West. Synegi's business spans storage area and network-attached storage, remote replication and file sharing services and high-availability backup. Business continuance is our core strength, with over 150 successful disaster recovery implementations attesting to our reputation for outstanding service and value.

2132 Michelson Dr □ Irvine, CA 92612 □ 949-222-0088

Knowing how data flows across networks - LAN, WAN, NAS & SAN - is Synegi's calling card. That understanding has translated into a steadily expanding and extremely loyal customer base.

Our Business

High Availability Storage & Backup

Data has value only to the extent that it's available where and when needed. Happily, data storage technologies have advanced greatly in recent years, presenting enterprises with a plethora of data protection alternatives to choose from. Synegi's backup and storage specialists have the experience to guide end-users through those choices. The outcome may be a simple and straightforward direct-attached storage sub-system - or a sophisticated multi-site SAN/NAS solution. Synegi's commitment to helping its customers do more with less is also evidenced by its commitment to new technologies, like iSCSI - please see our **IP SAN Portal** for more information about developments on that front.

Business Continuity & Disaster Recovery

Providing true business continuity and disaster recovery protection is clearly the biggest challenge facing organizations today, and often a plan that looks good on paper can turn into a real-time implementation nightmare. Architecting and implementing high availability disaster recovery scenarios has long been Synegi's principal mission, and few - if any - consultants or integrators can match our breadth of experience.

Consulting & Network Integration

Synegi's Technical & Engineering Group is made up of professionals with the certifications and hands-on experience our customers have come to rely on for on-going, retainer-based support as well as project-specific assignments. Our consulting practice includes backup system design and implementation, SAN, NAS & Server consolidation, as well as platform upgrades such as Exchange 2003, AD, VMware, Citrix and email archiving.

Technology Assessment

Synegi takes its motto, *navigating the future of technology*, seriously, and enjoys a front-line position when it comes to evaluating and introducing new ideas and solutions to its customer base. That's because OEMs - whether startup or incumbent - make sure that Synegi is their first stop whenever they bring major new solutions to market.

Seminars & Workshops

Hundreds of IT professionals have benefited by participating in Synegi's ongoing Business Continuance Workshops.
